

WINGS OF EAGLES VIDEO

IF GOD?

SUMMARY: A 20 minute video to provide an overview for apologetic for personal evangelism and a review for existing members on the topic of whether it is reasonable to believe in a God or atheistic evolution, coming to the conclusion that it is reasonable to believe in God.

WINGS OF EAGLES VIDEO:

The objective of the Wings of Eagles video "IF GOD?" is to clearly demonstrate that it is a logical and scientific conclusion to believe that some sort of god exists. This can be reviewed in the video and the note pages which accompany it.

The video can be stopped at any point for discussion and questions, and should be followed for a period of open questions at the end.

After review of the video, the following are possible questions to stimulate discussion:

1. Do you understand that for matter to come into existence in the universe from nothing violates the laws of science and therefore must have been a miracle.
2. Do you understand that scientific truth is what most educated people believe at a given time, and may not actually be true in some cases?
3. Do you understand that Charles Darwin said in the last sentence of his book *The Origin of Species* that God created at least the first forms of life?
4. Do you understand that the Rattlesnake and the Bombardier Beetle are examples of things which simply could not have evolved, but rather are proof of an intelligent designer?
5. **KEY QUESTION:** Do you understand and believe that we cannot be here as an accident of atheistic-evolution but rather must be here because there is a supernatural being or a god?

If you do not get a positive response on the key question, there is likely little benefit in going on with the next video.
